

PATTERNS OF

# Encaustic Tiles.

Manufactured by

MAW AND COMPANY,

Benthall, Near Broseley,

SHROPSHIRE.

1853.

Library

The following Collection of Patterns (a portion of which is registered copy-right) is arranged in a series, commencing with Greek, Roman, or Italian designs, followed by Moresque, Elizabethan, and Tudor or Perpendicular, then by Decorated and Early English, concluding with some adaptations of Norman and Romanesque, or Byzantine Patterns. The greater part of those which may be denominated Classic, as well as the Elizabethan, and some of the Tudor Patterns have been recently designed for Maw and Co., by H. B. Garling, Esq., Architect, London. Most of the Mediæval Patterns are copied from Ancient Tiles, for which Maw & Co. will be happy to give the authorities, and also, when requisite, to forward for inspection, large fac simile engravings of the Tiles, as executed by them. Of the many modern attempts to produce a paving material, combining appropriate design with the essential requisites of extreme hardness and durability, none have borne comparison with the Encaustic, or Inlaid Tile, one of the most valuable productions of Mediæval Art, than which nothing can be more suitable either for pavements or as a most durable substitute for wainscot on walls. Their power of reflecting heat renders them especially desirable for lining Fire Places, for which Maw and Co. supply moveable stoves of appropriate design. (Patterns and prices of the stoves forwarded to order).

It will continue to be the object of Maw and Co.'s endeavours to maintain the reputation of this valuable description of pavement, by careful attention to the various requisites for producing it in perfection, and at the same time of supplying it at as low a rate as the peculiar difficulties and great risk inseparable from the manufacture will permit.

**The Arrangements** (commencing at page 17), of some of the Mediæval Patterns will serve to indicate the almost endless variety of effect of which these Tiles are capable, but Maw and Co. will be happy to adapt them to such plans as they may be favoured with, introducing any of the patterns which they have not the means of shewing in these arrangements.

Although only three colours are shewn in this book, it will be seen by the following price-list that both figured and plain Tiles of other colours are manufactured by Maw and Co. Samples forwarded at list prices.

**Laying.**—Encaustic Tiles can be properly laid by any intelligent mason. The usual mode is to lay them to a line in a bed of either good mortar or Roman cement. Where the ground is not sufficiently solid to be depended upon, it should be covered with a level and even bed of concrete, 2 or  $2\frac{1}{2}$  inches thick. After the Tiles are laid, a little thin Roman cement may be run into the joints and wiped off immediately with a sponge or wet flannel.

#### NET CASH PRICES PER DOZEN, AT THE WORKS, BENTHALL.
